

# Six-day workshop inaugurated at IIT-K

Isolated studies won't do,  
budding engineers told

AN INTERDISCIPLINARY approach has become the first condition for the success of a civil engineer. Isolated studies related to civil engineering would not yield any fruitful results; said the deputy director of the Indian Institute of Technology (IIT-K) Dr RK Thareja.

Inaugurating the six-day workshop on "Earthquake resistant practices" at the Institute on Monday, Dr Thareja said Architectural Engineering and the Electrical Engineering were the two pillars of civil engineering.
